

# Project Close - repos and scripts

## List of repos in P2 Bitbucket account

There are a lot of repos on Phase2's Bitbucket account - we want to make sure we transfer all of those that are relevant. Once we identify which ones are needed, we can provide the repos and deployment scripts.

### For WRI China Specifically

I don't know of any specific docs but based on what I can tell that site is hosted from that AWS image using docker.

The docker image looks like it has the directory `/home/ec2-user/wri.org.cn/docroot` mounted to `opt/drupal/web` so I believe updating the files in `/home/ec2-user/wri.org.cn/docroot` would update them for that site. The last time those files were updated looks like around Oct 2020. There is a file `/home/ec2-user/deploy.sh` that looks like it would do a git pull of the aws branch of the repo `git@bitbucket.org:phase2tech/wri_wrichina.git` and `rsync` the docroot directory of it into `/home/ec2-user/wri.org.cn/docroot` I can dig more if needed but it looks like the basic process is:

- Update the aws branch of repo [https://bitbucket.org/phase2tech/wri\\_wrichina](https://bitbucket.org/phase2tech/wri_wrichina)
- Connect to the aws instance as the ec2-user and run the `deploy.sh` script
- Execute any needed updates (probably by doing something like:
  - `docker exec -it wriorgcn_drupal_1 /bin/bash`
  - Then doing things like
    - `drush --uri=http://drupal --root=/var/www/html updb`
    - `drush --uri=http://drupal --root=/var/www/html cc all`
